

System Integration

with a human touch for people, by people

Our approach to
Modularity

The Opportunity before You

Like the path to modularity, 10 years ago many of the largest and most innovative global companies did not exist. Uber is now the largest car company in the world, but until recently did not own any cars. Airbnb is now the largest hotel company in the world but does not own any properties. Facebook is the largest news curator in the world but does not own any news publications. **What is the common denominator?** Innovative technology platforms.

Platforms unite previously disparate bits and bytes of information into a user-friendly, modular enterprise. A fundamental shift is happening in our environment set-up by technology platforms. **Medicaid agencies can harness the power of this technology** by partnering with innovative companies.

Named Silicon Review's 50 Smartest Companies, Cambria can guide and lead agencies into the new era.

Blending Technology Innovation with A Human Approach

The Medicaid Enterprise modernization maze before each state is daunting. Which module first? What integration standard? How will we manage eight vendors, not just one? Will it actually distribute risk? Be cheaper? Be innovative?

What makes Cambria different as a System Integrator (SI)?

Pioneer in Services for MES Modularity

One of the few vendors providing SI services to Medicaid agencies. Currently supporting two of the country's largest Medicaid programs – California and Florida in SI and planning activities. We also serve in the capacity of PPMO, EPMO, PMO in the states of MS and LA. In addition, we are the SI overseeing the development for the Common Web Portal which spans two (2) MS Agencies (Medicaid and Human Services) as well as multiple federal agencies (CMS and FNS).

Custom Enterprise SI Platform

A robust COTS / SaaS solution to meet your MES needs and secured using Azure Government Cloud. Our solution combines an ESB platform, operational data store, master client / provider index, integrated access customer portal, and identity management.

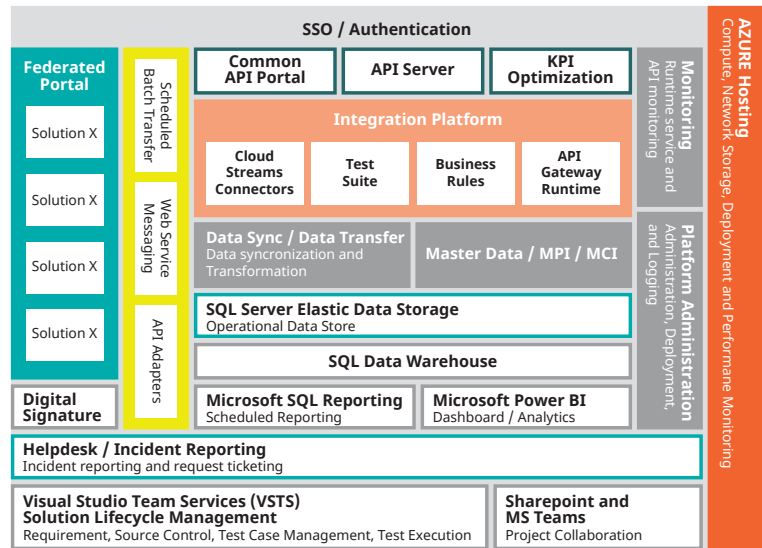

Digital Government Innovator

A recognized leader in public sector transformation, with more than 15 agile projects, conversational user interface (CUI) solutions, DevOps, and cloud practices that deliver value quickly for staff, providers, and beneficiaries. Putting the client first with a focus on human-centered design and user experience in all our systems implementations.

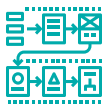

Cambria's SI Solution

The Cambria Integrated Platform Solution (CIPS) is 100% COTS / SaaS, secure, and easily configurable. Our solution acquires, integrates, and transforms complex multi-sourced structured and unstructured data and delivers it in an intuitive format that promotes self-service and inspires clear insights. We utilize an Integrated Enterprise Solution with a functionality of tools centered around Gartner and Forrester's leading enterprise platform.

The solution also contains an Operational Data Store (ODS) built on Azure's SQL database. It is designed around MITA 3.0 and Fast Healthcare Interoperability Resources (FHIR) which uses Data Sync for data conversion / migration, as well as an integrated customer portal.

Key Services

System Integration and Oversight

Full-service multi-vendor coordination with strong PMO, program governance, strategy, and vendor on-boarding.

Interface Integration

Standards-based approach to integration, runtime application program interfaces (API), and centralized processing for legacy interfaces and newly on-boarded modules.

Data Services

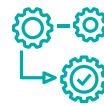

Data modeling, standardization, and interface design supports migration, data conversion, and testing. A focus on end-to-end testing across all modules.

Hosting and Security

"Cloud-first" strategy on Microsoft Azure Government Cloud that provides infinite scalability with over 8,000 state and local government agencies now using Microsoft.

CIPS Architecture

Integration Platform

Gartner's leading ESB and integration platform for SOA based processing and facilitated data exchange between all modules.

Operational Data Store

Ability for State to "own" the data using a relational operational data store, Data Sync, and day-to-day operational needs for reporting.

Integrated Customer Access Portal

Built on a modernized HTML5 architecture and mobile compliant with single-sign-on / identity access management across the platform. Includes innovative Conversational User Interface (CUI).

Master Indices (MPI / MCI)

Centralized index of clients, merging of data from multiple source systems, and synchronization of master data using our (MDM) solution.

Tony Franklin Director, MMIS Practice Lead

He is experienced in large-scale system implementations and health and human services solutions. He leads the expansion of our national MMIS Practice as well as provides oversight and directs MES and HHS projects in the East Region. He is the programmatic lead for the FL Strategic Advisory Services Project and the Project Director for the MS MES PMO and is based out of Jackson, MS.
